

**AMENDMENTS TO THE CLAIMS**

The following is a complete, marked up listing of revised claims with a status identifier in parentheses, underlined text indicating insertions, and strikethrough and/or double brackets indicating deletions.

Listing of the Claims:

1. (Currently Amended) A versatile-linker compound of a structure represented by following general formula (1),

where ~~wherein~~ Y has a structure represented by O or NH, and X has a structure represented by following general formula (2);

~~serving as a multi branched structure moiety including four hydrocarbon derivative chains, wherein the hydrocarbon derivative chains each include an aromatic amino group at an end thereof, and may or may not include a carbon nitrogen bond in a backbone thereof.~~

wherein m<sup>1</sup>, m<sup>2</sup>, n<sup>1</sup>, n<sup>2</sup>, p<sup>1</sup>, p<sup>2</sup>, p<sup>3</sup>, and p<sup>4</sup> are independently integers of 1 to 6.

2. (Canceled)

3. (Currently Amended) The ~~versatile~~ linker compound according to Claim-21, where m<sup>1</sup>, m<sup>2</sup>, n<sup>1</sup>, n<sup>2</sup>, p<sup>1</sup>, p<sup>2</sup>, p<sup>3</sup>, and p<sup>4</sup> are all represented by 2 in the general formula (2).

4. (Previously Presented) A ligand which comprises the aromatic amino group of the linker compound according to Claim 1 and a sugar molecule introduced into the aromatic amino group.

5. (Original) The ligand according to Claim 4, wherein said sugar molecule is any one of a monosaccharide, an oligosaccharide, and a polysaccharide.

6. (Currently Amended) A ligand of a structure represented by following general formula (3), where  $m^1$ ,  $m^2$ ,  $n^1$ ,  $n^2$ ,  $p^1$ ,  $p^2$ ,  $p^3$ , and  $p^4$  are independently ~~an~~ integers of 1 to 6.

~~where~~ wherein Y has a structure represented by O or NH, and  $R^1$ ,  $R^2$ ,  $R^3$ , and  $R^4$  independently ~~has~~ have a structure represented by

and  $R^6$ ,  $R^7$ ,  $R^8$ ,  $R^9$ , and  $R^{10}$  have a structure selected from the group consisting of

7. (Currently Amended) A ligand of a structure represented by following general formula (4), where Y has a structure represented by O or NH, and  $m^1$ ,  $m^2$ ,  $n^1$ ,  $n^2$ ,  $p^1$ ,  $p^2$ ,  $p^3$ , and  $p^4$  are independently an integers of 1 to 6.

8. (Currently Amended) A producing method of a versatile linker compound, comprising the steps of:

protecting an aromatic amino group end of each of four side chains of an amine compound;

carrying out a condensation reaction between a biotin-containing compound and ~~an~~ the amine compound wherein ~~including four~~

~~branched chains each having an each~~ aromatic amino group end of the amine compound is protected by a protecting group; and

deprotecting the protecting group at the aromatic amino group end.

9. (Currently Amended) A producing method of a ligand, comprising the step of carrying out a reductive amination reaction by ~~using~~ adding the linker compound of Claim 1 and a sugar molecule.

10. (Previously Presented) A sugar molecule introducing method which comprises the step of causing a solution containing the ligand of Claim 4 to come into contact with a supporter including streptoavidin or avidin immobilized on a surface thereof.

11. (Previously Presented) A ligand carrier which comprises the ligand of Claim 4 immobilized on a surface of a supporter through a biotin-avidin bond formed between a biotin moiety or iminobiotin moiety and streptoavidin or avidin.

12. (Original) The ligand carrier according to Claim 11, wherein the supporter includes streptoavidin or avidin immobilized thereon.

13. (Currently Amended) The ligand carrier according to Claim 11, wherein the supporter is ~~used as a~~ sensor chip for a surface plasmon resonance measurement.

14. (Currently Amended) The ligand carrier according to Claim 11, wherein the supporter is used as a column for an affinity chromatography carrier.

15.-17. (Canceled)

18. (Previously Presented) A sugar molecule introducing method which comprises the step of causing a solution containing the ligand of Claim 6 to come into contact with a supporter including streptoavidin or avidin immobilized on a surface thereof.

19. (Previously Presented) A ligand carrier which comprises the ligand of Claim 6 immobilized on a surface of a supporter through a biotin-avidin bond formed between a biotin moiety or iminobiotin moiety and streptoavidin or avidin.

20. (Previously Presented) The ligand carrier according to Claim 19, wherein the supporter includes streptoavidin or avidin immobilized thereon.

21. (Currently Amended) The ligand carrier according to Claim 19, wherein the supporter is used as a sensor chip for a surface plasmon resonance measurement.

22. (Currently Amended) The ligand carrier according to Claim 19, wherein the supporter is ~~used as a column for an~~ affinity chromatography carrier.

23. (Previously Presented) A sugar molecule introducing method which comprises the step of causing a solution containing the ligand of Claim 7 to come into contact with a supporter including streptoavidin or avidin immobilized on a surface thereof.

24. (Previously Presented) A ligand carrier which comprises the ligand of Claim 7 immobilized on a surface of a supporter through a biotin-avidin bond formed between a biotin moiety or iminobiotin moiety and streptoavidin or avidin.

25. (Previously Presented) The ligand carrier according to Claim 24, wherein the supporter includes streptoavidin or avidin immobilized thereon.

26. (Currently Amended) The ligand carrier according to Claim 24, wherein the supporter is ~~used as a~~ sensor chip for a surface plasmon resonance measurement.

27. (Currently Amended) The ligand carrier according to Claim 24, wherein the supporter is ~~used as a column for an~~ affinity chromatography carrier.

28. (Currently Amended) A method for a measurement of surface plasmon resonance, ~~wherein~~ which comprises the step of immobilizing a linker compound of ~~a structure of Claim 1 is used to immobilize the sugar molecules on the sensor chips.~~
